Probe02 person speed changes, seed 004: final distance behavior
Position mode: late excursion leaves insufficient final dwell (original FAIL)
Distance band: +/- 0.5 m
Recorded 10 Hz evaluations
Recorded end
92.472 s
First observed back in band: 90.152 s
Crossing lies in [90.052, 90.152] s
Required final window: 3.000 s
Actual final dwell: 2.320 s < 3.000 s
Distance error (m)
Velocity mode: final distance band maintained (original PASS)
Distance band: +/- 0.5 m
Recorded 10 Hz evaluations
Recorded end
92.860 s
Required final 3.000 s maintained
Continuous sampled in-band suffix starts at 58.100 s;
dwell through recorded end = 34.760 s.
Distance error (m)
Simulation time (s)
10 Hz observations; lines only guide the eye. Crossing times are bounded by adjacent samples.
Dwell uses the original evaluator's recorded-end convention (last-sample gaps: 0.020 / 0.060 s).
Positive error means farther than the requested 5 m. Original thresholds and verdicts are unchanged.
